# Mighty Fire Breaker DIY Sprinkler System Kit

It's of the utmost importance to follow our guidelines when it comes to they amount of sprinkler heads and distance between and overall distance per the tank size of MFB-31-CitroTech to insure the chemically defended space. In our 50 gallon DIY we are supplying 4 sprinklers spaced at maximum 30' from each other so we get go overlaying of the fire inhibitor spray. In our 100 gallon DIY you get 6 sprinkler heads and with the same 30' on center spacing you get a total of 180' of defense.

Our box supplies you with a 1" electric or gas pump your choice. Both the pump and tank are pre plumbed quick disconnect couplings. Our electrical motor and auto start is all pre wired ready to plug in. Are sprinklers are set with have pre plumbed in a way that allows you to test for leaks and sprinkler head accuracy make sure they are adjusted to hit your targets. After you have tested everything with water it's time to blend the chemistry with the high pressure nozzle. Send the nozzle we supplied down into the bottom of the tank and fill and blend our safe fire inhibitor up until the tank is almost full.

If you are planning on trying to get an insurance reduction you will need to send us a plot plan so we can try and support you with a package for the Underwriter and Brokrker
